

total potato stocks

December 1, 1971

Release:
December 13, 1971
3:00 P. M. EST

Storage stocks of Irish potatoes for all uses held by growers, local dealers, and processors in fall producing areas totaled 173.2 million hundredweight on December 1, 1971, according to the Crop Reporting Board. This was 1 percent less than the 174.7 million cwt. on hand for all uses a year earlier but 7 percent more than the 162.5 million of December 1, 1969.

Stocks in the eight eastern States, at 44.1 million cwt., were slightly above last year's holdings of 43.9 million cwt. Maine stocks of 30.6 million cwt. compare with 29.3 million cwt. on hand a year earlier. Upstate and Long Island, New York, and Pennsylvania each had fewer potatoes on hand than a year earlier.

December 1 stocks in the eight central States totaled 39.3 million cwt. this year compared with 36.3 million in 1970. Minnesota with 11.9 million cwt. is up from 9.2 million cwt. a year ago. The North Dakota total is 13.8 million cwt. compared with 13.0 million cwt. a year earlier. Stocks in Wisconsin of 6.7 million were up 8 percent from last year but Michigan, with 3.9 million cwt., was down 19 percent from a year earlier.

In the eight western States, December 1 holdings totaled 89.7 million cwt., 5 percent below last year's record high of 94.5 million cwt. Stocks in Montana, Oregon, Washington, Colorado, and California are less than December 1 last year. Idaho stocks of 54.0 million cwt. compare with 53.5 million cwt. December 1, 1970. Washington stocks, at 16.5 million cwt., were down 11 percent.

Disappearance to December 1 from the 1971 fall production of 249.9 million cwt. was 76.7 million cwt. compared with 78.1 million cwt. in 1970 and 76.0 million cwt. in 1969.

Movement of the 1971 fall potato crop to fresh market and chippers through November 30, as indicated by rail and truck unloads, was less than a year earlier. Quantities from the 1971 fall potato crop used for processing, excluding chips, through November 30 were about equal to the corresponding 1970 period.

Sales of fall potatoes for all purposes--including fresh market, processing, seed, and livestock feed--accounted for about 88 percent of the fall production in recent years. The balance of the crop disappearance is from shrinkage and waste and usage on the farms where grown for seed, livestock feed, and food.

Fall Potatoes: Production, December 1, January 1, February 1 and March 1
